

WIDGET COLUMN - BOTON FLOTANTE (video 40)

Se utilizó un Column para organizar los widgets (como los textos) en una columna vertical, centrándolos en la pantalla. Dentro de esta columna, hay un FloatingActionButton que, al ser presionado, incrementa un contador. Este botón tiene un ícono de +1 y al presionarlo, actualiza el contador mostrado en la pantalla.

The screenshot shows an IDE interface with the following details:

- File Structure:** The project structure includes files like `main.dart`, `SegundaPantalla.dart`, and `SegundapantallaState.dart`. It also shows platforms (linux, macos, windows) and build configurations (Android, iOS).
- Code Editor:** The main.dart file contains Dart code for a floating action button that increments a counter. The code uses a Column widget to stack elements vertically and a FloatingActionButton to trigger the incrementation.
- Output View:** A preview window shows a mobile screen with the number "12" and the text "Cantidad de clicks". A floating action button with a plus icon is visible in the bottom right corner.
- Terminal:** Shows the command `Bootstrap v5.3.7`.
- Problems View:** Displays an error message: "Parameter 'key' could be a super parameter, dart:useSuperParameters [lin. 9, col. 9] ^".
- Status Bar:** Shows the line number "Lin. 44, col. 1", encoding "Espacio: 2", and character set "UTF-8".
